Симптомы (общедоступное)

- Controller indicates blue

Проблема (общедоступное)

- Controller unpaired from headset

Решение (общедоступное)

There's to ways to fixing this:

-

First way:

-

In the main menu choose “GAME MACHINES”

-

Then select the PC where pairing is required, then choose “(ON) Pair controllers mode”

-

Press and hold both the Apps button and the System button on the controller simultaneously. This will send the headset into pairing mode, and the controller will start flashing blue. Wait until the light turns green then release the two buttons.

-

After that press “(OFF) Pair controllers mode”

-

Second way:

-

Open SteamVR on the corresponding game machine.

-

Right-click the icon of the controller you want to pair (an unpaired controller’s icon is grey, while a paired one’s is green) and choose “Pair controller”.

-

Press and hold both the Apps button and the System button on the controller simultaneously. This will send the headset into pairing mode, and the controller will start flashing blue. Wait until the light turns green then release the two buttons.

-

Check the SteamVR panel to see if the controller has paired successfully and repeat for the second controller if needed.
